SIBOARD Low-voltage distribution system

Solution Partner

Power Distribution

SIBOARD A low-voltage power distribution system

In industry, buildings and infrastructure, the operation of different systems depends on safe and reliable power distribution. Even a short power failure may have serious consequences. To meet relevant safety requirements you need products and systems that can manage all kinds of contingencies.

As one of the world's leading suppliers of lowvoltage power distribution systems, Siemens provides its customers with stable, reliable, safe and intelligent solutions. Whether you are looking for energy security or energy efficiency solutions, SIBOARD series products can protect your power distribution system through its excellent safety features and reliability. SIBOARD offers comprehensive application coverage for your power distribution needs with rated currents up to 800 A. Whether in construction, infrastructure or industry, you can always rely on the efficient, safe SIBOARD series.

SIBOARD has been fully tested by Siemens in accordance with IEC 61439 with test certificate. Siemens license partners can use this system to manufacture distribution boards locally.

Panel builders have many requirements and we support our customers in fulfilling them

- Easy production
- Achieving sustainability goals
- Time-efficient work
- Flexibility
- Opening up new business models

- Cost efficiency
- Quality work
- Local value creation
- Customized solutions
- Reliable security

Efficient and intelligent – SIBOARD with SENTRON Components

Today's customers are demanding product customization, energy efficiency and safety, and convenient electrical solutions. These increasingly stringent requirements have created major challenges for product manufacturers, utilities and infrastructure builders.

In this particular landscape, the compatibility of the SIBOARD low-voltage distribution system takes on pivotal significance as it facilitates seamless integration into existing infrastructures to meet these requirements. This innovative system facilitates the effective distribution of energy, making substantial contributions to energy efficiency while concurrently ensuring safety and convenience.

The SIBOARD low-voltage distribution system, integrated with a new generation of intelligent Siemens components, offers a safer and more reliable, flexible and intelligent experience.

Smart protection for reliable power distribution

The new generation of Siemens low-voltage protection components with communication functions can

- Accurately measure and upload different parameters of the entire power distribution system
- Monitor and warn in real time any intelligent power distribution terminal
- Achieve rapid fault diagnosis
- Provide users with continuous and reliable power supply protection

SIBOARD License Partnering – Benefits and steps

A strong partnership with many advantages for both sides

Siemens SIBOARD license

- Based on established products (Siemens ALPHA UNIVERSAL distribution boards)
- Completely tested product (IEC 61439) and VDE-tested
- Provision of a complete set of electrical drawings to our license partner
- Suitable for Siemens protection, switching, measuring and monitoring devices
- Continuous development

License partner

- Local contact
- Market knowledge
- Regional production
- Higher value add
- Faster response times

Becoming a SIBOARD license partner follows a structured process. Firstly, potential partners are evaluated to assess suitability. If successful, the second step is signing a license contract. Next, manufacturing implementation takes place, with initial samples produced by the licensee. The fourth stage is quality approval, including an initial check by Siemens. Lastly, the fifth step involves full-scale SIBOARD manufacturing. This ensures a seamless partnership, resulting in successful SIBOARD production by license partners.

SIBOARD License Benefits – Meeting the needs of panel builders

Panel builders attach importance to these three primary topics:

When creating low-voltage distribution boards, panel builders strongly prioritize efficiency, reliability and safety. Streamlined operations, by reducing the time and resources expended during assembly and installation, ultimately lead to enhanced efficiency. Reliability is paramount to ensure uninterrupted power distribution, safeguarding critical systems against disruptions. Safety stands as a cornerstone, as these boards are integral to the electrical infrastructure, necessitating robust protection against hazards for both personnel and equipment. With our distribution boards, we help achieve these objectives and guarantee optimal functionality. This also fosters trust among end users, confirming the board's ability to provide consistent, safe and efficient power distribution across different applications.

SIBOARD Starter Kit – Must-buy parts

To produce SIBOARD distribution boards, a license package and the relevant information will be provided after the kick-off meeting.

The must-buy parts:

Handle

Door-locking system

Busbar holder

ltem	Article number	Description		
	8GK9560-0CH04	Standard SIBOARD handle for wall-mounted boards (1 unit)		
	8GK9560-1CH04	Standard SIBOARD handle for wall-mounted boards (50 units)		
	8GK9560-0CH05	Sealing for Standard SIBOARD handle for wall-mounted boards		
	8GK9800-0CH00	Door-locking system for floor-mounted boards with double bit including SIBOARD key plate without locking bars		
	8GK5760-0CH11	Busbar holder for 15×5, 20×5 or 30×5 mm busbar (40 units)		
	8GK5760-0CH12	Busbar holder for 30×10 mm (40 units)		
:::[:::::[:::	8GK5760-0CH13	Busbar holder for two times 20×10 mm or two times 30×10 mm (20 units)		

SIBOARD-Branded – The unique door handle

Experience an immediate value-add component with the branded door handle, which serves as a symbol of quality that fosters optimal customer retention. It will assist you in customer demonstrations, enhance your partner credibility, and support the acceleration of customer engagement and conversion in your target market.

The SIBOARD name is integrated in the door handle.

8GK9560-1CH04 Standard SIBOARD handle for wall-mounted boards (10 units)

SIBOARD Application Fields – At a glance

SIBOARD can be widely used in:

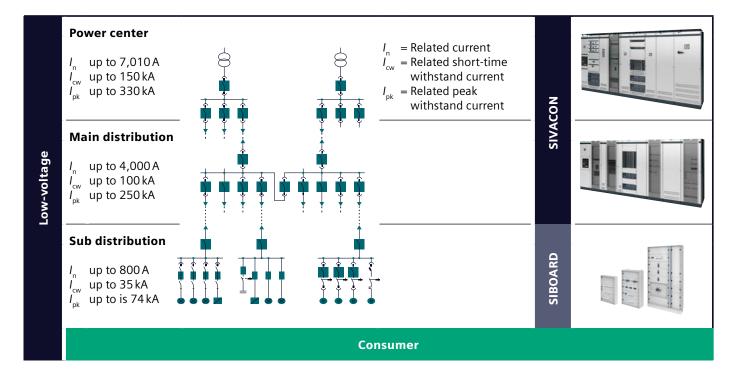

- Residential, administrative or commercial buildings
- Municipal industry, rail transport, industrial production
- Applications such as data centers, power generation and transmission
- Petroleum and petrochemical industries

SIBOARD – Ensuring a continuous power supply

With SIVACON and SIBOARD we ensure a continuous power supply from sub-distribution level to 7,010 A

SIBOARD Installation – Convincing through the modular concept

SIBOARD facilitates wallmounted and floor-mounted installation applications. Thanks to the well-designed modular installation concept, SIBOARD can provide modular quick-installation kits to simplify your design and installation work

SIBOARD presents itself as a versatile protection solution with a combination of:

Modular design

The modular design concept enables an efficient, flexible, secure and reliable solution for a wide range of applications. It covers the current range from 125 to 800 A and provides various options for installation in cabinets that meet the specific requirements of different application scenarios.

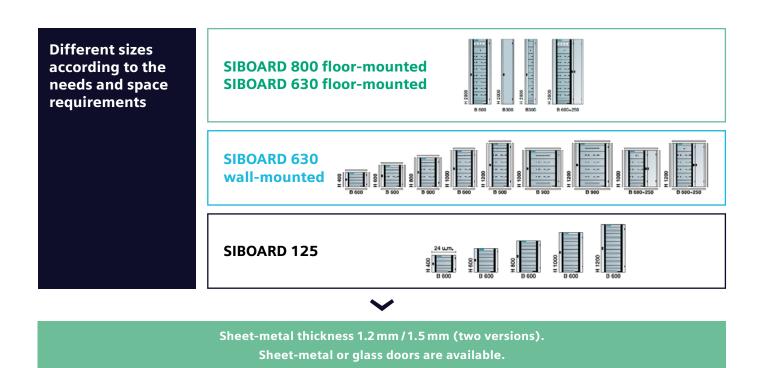

Efficient assembly

Very helpful are the quick-assembly kits that significantly expedite the assembly and installation of the cabinet. This not only reduces assembly time but also enhances the overall efficiency of production. Furthermore, customers can utilize simulation software to design their own configurations free of charge. This grants them significantly more configuration options tailored to their specific requirements.

Flexible configuration

The product provides a significant level of protection through its IP54 protective rating. This ensures its dependable operation in diverse environments and safeguarding against external influences. Overall, SIBOARD is a versatile protective solution with a fusion of modular design, efficient assembly and customizable configurations that cater to a multitude of protection requirements.

SIBOARD – Different sizes according to needs and space

Our license partners benefit in many ways from the local production of SIBOARD distribution boards:

Efficiency

- Local contact and market know-how
- Regional production and short delivery times
- Cost reduction and greater
 competitiveness
- Reduction of CO₂ emissions

Reliability

- Provision of complete drawing set
- Production with standard machines and tools
- Usage of the knowledge of Siemens
- Every improvement to Siemens ALPHA UNIVERSAL distribution boards will also be incorporated into SIBOARD

Safety

- Completely tested distribution boards
- VDE-certified
- Fulfillment of all requirements of IEC 61439
- Protection of people and environment

SIBOARD Quality – Tested and approved by the VDE Institute

The SIBOARD distribution board system is tested and approved by the third-party VDE Testing and Certification Institute. The Association for Electrical, Electronic and Information Technologies (VDE) certifies that a product or a system meets specific quality and safety standards. The VDE Institute was founded in 1920 and operates worldwide.

SIBOARD Distribution Boards – All sizes fully tested

What does certified according to IEC 61439 mean?

It means that a product or installation complies with the requirements set forth by the IEC 61439 international standard. This standard pertains to electrical low-voltage switchgear assemblies. It specifies various technical and safety-related requirements to ensure the safe and reliable operation of switchgear assemblies, meeting the relevant norms. Certification according to IEC 61439 indicates that the respective product or installation has been developed, manufactured and tested in accordance with the standards defined in the norm. This certification helps ensure the quality, safety and interoperability of electrical switchgear used in various industrial applications, whether in power distribution, industrial control, building automation or other fields.

All ratings are tested according to IEC 61439.

Example of SIBOARD 125

Rated voltage	Un	AC 690 V
Rated operational voltage	Ue	AC 520 V
Rated insulation voltage	Ui	690 V
Rated impulse withstand voltage	Uimp	6 kV
Rated current of the assembly	InA	125 A
Rated current of a main circuit	Inc	125 A
Rated conditional short-circuit current	lcc	≤ 10 kA
Rated short-time withstand current	lpk	≤ 17 kA
Frequency	fn	40 to 60 Hz

SIBOARD – A suitable distribution board for each electrical current rating

Whether you are looking for wallmounted or floor-mounted distribution boxes, SIBOARD power distribution system will be your best choice.

SIBOARD 125 embedded, wall-mounted distribution box:

A maximum current of 200 A, standardized installation components, modular design scheme and flexible device configuration provide more possibilities for the selection of power distribution equipment.

SIBOARD 630 wall-mounted or floor-mounted distribution box:

Maximum current 630 A. Larger accommodation space and more installation methods enhance the adaptability of the power distribution system.

SIBOARD 800 floor-mounted distribution box:

Up to 800 A current application solution to meet more stringent operating environment requirements.

Highlights:

- Comprehensive current coverage, from 125 A to 800 A
- A variety of cabinet installation methods are available depending on the application scenarios
- Rapid assembly kits greatly shorten the cabinet assembly and installation time and improve production efficiency
- The customer's free design concept verified by simulation software provides more configuration possibilities
- Protection grade up to IP54
